## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 2/2/06 have been fully considered but they are not persuasive. Applicant argues that Schaefer does not teach the exposure step to form the indented surface with simple abrasion not melting the surface.

In response to the argument, examiner states that the argument is not persuasive because both the monochromatic light and the laser beam will create heat and eventually melt the substrate surface in order to form indented surface.

Additionally, the claims are not limited that the light exposure to the substrate surface does not melt the substrate material during the formation of the indented surface.

Therefore, the rejection of the previous office action is repeated herein as follows:

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Schaefer et al (4,299,860).

Schaefer et al disclose a process including the step of exposing a substrate with a laser beam, which resemble with the claimed monochromatic light in order to form melted or shallow pool (16) pattern-wise on the upper surface of the substrate and subsequently injecting particles (22) for depositing on the pool or in the melted area through a nozzle (24), wherein the laser beam is in relative movement with the substrate to be locally melts with controlled depth and width (col.1, line 66-col.2, lines 10 and figure 1).

Schaefer et al also suggest that the particle with a liquid pool can be solidified to form the coating of particles on the melted area on the substrate (col.3, lines 42-45).

***Allowable Subject Matter***

4. Claims 7-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: The cited prior art fails to teach the substrate is a glass bottle or a glass syringe.

***Terminal Disclaimer***

6. The terminal disclaimer filed on 2/2/06 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of USP 6,638,440 has been reviewed and is accepted. The terminal disclaimer has been recorded.

***Conclusion***

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
